

# Receptive To Customer Needs

## Quality is their priority

Since 1989, RJB Machining has consistently grown its operations with an eye to meeting customer needs.

As a leading precision-machining company serving Canada's flourishing technology triangle and the larger North American market, RJB's most recent expansion into a second building will enhance both customer service and quality for the machined components it produces.

RJB's core precision machining operations occur in a 20,000 square foot plant in north Waterloo where the company produces everything from small, light weight aluminum components for high-tech cameras to large stainless steel flanges that are part of municipal water purification systems.

"Our recent expansion makes RJB a one-stop manufacturing shop," explains president Ron Bender. "More than ever, we can respond to our customers' needs for the highest quality in machined products from the prototype stage to full production, no matter what the process. And we now do this with even quicker turnaround times than we have previously achieved." An additional 3,300 square feet in an adjacent building is dedicated to sheet metal fabrication, while another 3,300 square feet handles painting and silk screening operations. Bender notes that "RJB provides Silk Screening services to customers for a variety of products such as on electronic front panel components." Looking ahead, Bender says that with "the added silk screening, laser punching and laser marking facilities combined with our core machining operations, RJB intends to become the main supplier to our customers."

Ron Bender, president of RJB Machining.

## One-Stop Manufacturing

- Design & Development of Prototype
- CNC Machining
- Silk Screening
- Laser Marking & Punching
- Precision Sheet Metal Fabricating
- Sub-Assembly or complete assembly of components/product
- Custom special purpose machine building

PROUD TO BE LOCATED IN  
CANADA'S TECHNOLOGY TRIANGLE  
FOR 17 YEARS
